The road to discovery
The road to discovery of the petroglyph sites was a long and arduous one. Kakade explains that many of the sites were discovered by chance. A mere six or seven years ago, a team of researchers from the Archaeology Department was conducting a survey of the laterite rock formations in the region. One day, while surveying the area, a team of researchers came across a petroglyph site. However, the researchers were not able to identify the site properly, and it was only after careful analysis that they were able to determine that it was a petroglyph site.

The discovery of the petroglyphs was made possible due to the efforts of the Archaeology Department and the team of researchers who were working in the area. The team of researchers, under the leadership of Kakade, worked tirelessly to identify and map the petroglyph sites. Their efforts were rewarded when they discovered a number of petroglyph sites in the area.

In order to protect the petroglyph sites, the Archaeology Department has taken several measures. Firstly, they have created a database of all the petroglyph sites in the area. Secondly, they have worked with the local authorities to create a system of management and conservation of the petroglyphs. Thirdly, they have worked with the local communities to ensure that the petroglyph sites are protected.

The petroglyphs in Maharashtra are an important part of the cultural heritage of the region. They are a testament to the ingenuity and creativity of the people who lived in the region in the past.
